# IVE Section Guide

What is the IVE Section?

IVE is an acronym for Interactive Video Education. UCO offers some courses as IVE where the live lecture is broadcasted over Internet. Students may watch the lecture real-time over Internet. In addition, students may interact with the instructor with the video camera and microphone on the student's computer.

Student must enroll for the section offered as "IVE". The section of which "Location" is marked as "IVE" is the IVE section.

Attendance Policy

There may be some required on-campus attendance dates. Those dates are posted on the class schedule. The above example shows that IVE section students must come to the on-campus class meetings (4:15-7:00pm) in MCS115 on July 5 and July 26.

Other than on-campus required attendance dates, the instructor decides if students are required to participate in the live broadcast of the lectures. This requirement does not appear on the class schedule. Thus, contact the instructor to find details before you enroll.

AdobeConnect URL

Several days before the first class begins, the instructor will email IVE students with the URL to join the live lecture broadcast. The email will be sent out to students' UCO email accounts.

Test Connection

If you have never attended IVE class using an Adobe Connect meeting before:

Test your connection: https://central.adobeconnect.com/common/help/en/support/meeting_test.htm

Get a quick overview: http://www.adobe.com/products/adobeconnect.html

Recorded Lectures

If the live participation of the lecture is not required, the instructor will record the lecture and make it available to watch as soon as the lecture is over.

Microphone and Speaker

It would be best if you wear a headset (instead of the built-in mic and speakers in the computer) to avoid feedback noise. If you do not have a headset, you are strongly encouraged to at least use an earphone or a headphone (no mic). The built-in mic and speaker together in your computer easily generate feedback noises during the live session. **You are asked to mute the mic** when you do not need to speak to avoid audio interferences.
